DETAILED ACTION

1. The amendment filed on 25 July 2007 have been received and entered. Claims 1-13, 15 and 17-24 as amended are pending in the application.

2. Claims 1-7 were previously indicated as allowed, and claims 8-13, 15 and 17-24 were previously indicated as allowable subject matter in the office action dated 21 February 2007.

Allowable Subject Matter

3. Claims 1-13, 15 and 17-24 are allowed.

4. The following is an examiner's statement of reasons for allowance: The present invention teaches embedding identification information into image files associated with displayable images in order to prevent unauthorized redirecting from a displayed image. Each of the independent claims identifies the distinct feature of adding unique identification information to identify access to the image file when a user accesses the image file. The closest prior art, Iwamura U.S. Patent 6,807,285 and Hoyle U.S. Patent 6,141,010 teach the embedding of identification information to prevent unauthorized redirecting from a displayed image. In the case of the Iwamura reference, Iwamura teaches means for receiving a displayable image and related data to the displayable image (the apparatus is supplied, or receives a displayable image G and related data, such as public key information and embedding information) (Iwamura: column 5, lines 15-21 and lines 53-61); means for recording the displayable image into the image file (recording, or loading the image data and related information into a file format shown in Figure 11) (Iwamura:

Art Unit: 2173

column 17, line 43-column 18, line 4); means for embedding unique identification information which uniquely identifies the image file into a non-displayable portion of the image file (embedding information that identifies the image such as image format identification data into the image header, which is not displayed when displaying the image from the image file) (Iwamura: column 17, line 58-column 18, line 4 and Figure 11); and means for preventing unauthorized redirecting from the displayable image by embedding the related data into the image file, which already includes the displayable image (embedding related data such as the watermark and confidential information into the image file comprising the image data G in order to prevent illegal copies or alteration/destruction of the image) (Iwamura: column 1, lines 33-48, column 5, lines 41-47 and column 6, lines 23-31). In the case of the Hoyle reference, Hoyle teaches pointers to at least one item of information enabling redirection from the displayable image to a site having the at least one item of information (the image file data sets comprise a number of user selectable links, or pointers, that will cause redirection to the corresponding URL site upon selection) (Hoyle: column 4, lines 19-49). However, the prior art teaches the identification information indicates the image format name, file size, image width, etc. and does not teach identification information that identifies access to the image file when a user accesses the image file. Therefore, the prior art fails to anticipate or render the above limitations obvious.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
